## Overview

This document contains release notes for the latest Survey release.

## Improvements and new features

This release includes the following improvements and new features:

### ENHANCEMENTS - GUESTSCOPE

- **Manage Template- Redirection issue:** The main menu option for Manage Templates has been updated to address a redirection issue. Previously, clicking Manage Templates redirected users to the At a Glance screen with the settings modal opened by default. This behavior caused confusion and did not direct users to the intended destination.
- **Recent Survey- Redirection issue:** Clicking the View/Respond to Surveys option in the main menu now takes users directly to the Recent Surveys screen.
- **Logout and other buttons/options have been removed from the legacy application when it is running in Desktop launcher:** This improvement will enhance the user experience and interface of the legacy application when launched in the Desktop Launcher. Specifically, the Logout and related buttons/options will be removed from the purple bar when the partner site application is running from Desktop Launcher. This modification streamlines the user interface and eliminates unnecessary options.

### USER ADMIN FEEDBACK

- **Cannot edit a dual user:** Users are encountering difficulties when attempting to edit a user who has access to both survey and workforce management products. When performing the specified steps to edit such a user, the system fails to display the permissions for the user. Instead, an error message appears in the console, and the screen goes blank.

## Fixed Issues

### Q1 2024 BUGS

- **User Administration - The user list does not load:** In some instances of previous releases, some users encountered an error when attempting to load the user list in the User Administration section. This issue has been resolved.
- **Maintaining recent survey screen selection on Survey Results screen:** Users of the new GUESTScope Dashboard (GSD) module expect the system to retain the selection made on the Recent Surveys screen when they click the Respond to Survey hyperlink on the Survey Results screen. This feature enhances the user experience by ensuring seamless navigation and data continuity between screens.
- **Duplicate data in existing template text on response and closing template:** The Manage Template screen in the GUESTScope dashboard displays duplicate data in the existing

template text drop-down menu, specifically for response and closing templates. This issue is observed across both 6x and 7x versions of the dashboard.

## Coming soon

These improvements, new features, and fixed issues will be delivered in an upcoming release.

### GUESTSCOPE - Enhancement

- **Departure and email address can be empty in survey results:** In the new GUESTScope Dashboard, there is a bug causing the Recent Survey screen to crash if the departure or email address fields in the guest user details are empty. This issue impacts user experience and prevents seamless navigation through the dashboard.
- **Display more colors based on range on trends:** The display for % of Problems and SRI will incorporate color-coded ranges, enhancing visualization and enabling quick interpretation of data. This feature replicates the functionality present in the legacy partner site application.

### USER ADMINISTRATION FEEDBACK

- **Security User button disabled/enabled in user details modal:** In the user details modal, the Make Security Admin button needs to be dynamically enabled or disabled based on the location and project data associated with the user. Currently, the button is always enabled by default, which may lead to inappropriate assignment of security admin privileges.
- **Security User checkbox in user list:** The checkbox for security admin privileges in the user list needs to be dynamically enabled or disabled based on the user's location and project data. Currently, the checkbox is always enabled by default, which may lead to inappropriate assignment of security admin privileges.

### Q1 2024 BUGS

- **Security user checkbox display issue:** After selecting the Security User checkbox to assign security user permissions in the new User Administration, the action is confirmed, but the selected status is not maintained visually. However, the user is successfully assigned as a security administrator.
- **GUESTScope Sample Survey link showing inactive card sets for some properties:** The GUESTScope Sample Survey link displays inactive card sets for some properties, which is impacting the functionality.

### STAFFSCOPE- ACTIVITY REPORT

- **STAFFScope Activity Report - Display all enrolled activity with hybrid enrollment using QR codes:** The Activity Report in STAFFScope currently displays only submitted survey results for hybrid enrollment, specifically when emails and QR codes are used. However, clients need the ability to view all enrolled activity, including employees enrolled via email who have not yet taken the survey. This functionality is crucial for clients to track and manage survey participation effectively.

- **Report not working properly:** The Activity Report functionality is not working properly for some clients.

## Help us improve

We value your input and want to hear from you! As we continue to enhance Unifocus products, we invite you to share your questions, suggestions, and feedback with us. If you have any thoughts or ideas on how we can improve our products, please don't hesitate to reach out to us at [product@unifocus.com](mailto:product@unifocus.com).
